Healthcare needed a backbone, so we built it.

Collective Health

Collective Health is not an insurance company. We're a technology company that's fundamentally making health insurance work better for everyone—starting with the 155M+ Americans covered by their employer.

We've created a powerful, flexible infrastructure to simplify employer-led healthcare, and started a movement that prioritizes the human experience within health benefits. We've built smarter technology that's easy to use, gives people an advocate in their health journey, and helps employers manage costs. It's a platform that's **data-powered and human-empowered**.

Our mission is to change the way people experience health benefits by making it effortless to understand, navigate, and pay for healthcare. By reducing the administrative lift of delivering health benefits, providing an intuitive member experience, and improving health outcomes, Collective Health guides employees toward healthier lives and companies toward healthier bottom lines.

of gaps in care closed

2:1
ROI on Care Navigation services

6-10x
Program engagement

"

From the beginning of implementation, it was clear that Collective Health wasn't just a vendor. They were going to be a true strategic partner.
